

DESIGNING SOLUTIONS

## 55 YEARS EXPERIENCE

Founded in 1968 in Guadalajara, Jalisco, with more than half a century of experience and the vision of becoming the architecture and design office with the largest international presence, we are the first comprehensive architecture firm in Latin America.

Our goal is to achieve comprehensive and innovative solutions, always seeking excellence in our projects.

In GVA we understand that our clients are both investors and final users of an architectural product. This approach allows us to make proposals to satisfy every aspect of the project.

Our flexible organizational structure allows us to efficiently adapt our practice to meet the specific requirements of each Project. All our processes are supported by quality control tools to make sure that our projects meet our client's expectations every step of the way during the design process.

We use highly participative methodology integrating consultants and key stakeholders that contribute with the Project throughout the different design phases. With a broad experience in the development of different architectural typologies, we have a comprehensive vision of each particular Project's challenge with focus on the demands of today's community living experience.

We carefully develop sustainable projects maintaining the functional and aesthetic balance between urban and natural environments.
